Hi Doug, I'm still unloading all my tools but stopped to send a couple photos.

Should I get some prints made and send them with the bills when I send the hard copies?

We finished this evening. The pad 1 sump itself was leaking a little but I got 95-98 5 of the pad 1 water headed to the new leach field.

I have a few fittings to take back to Scholzens and then it's all finished.

I'll need to go to Wheeler equipment and get the invoice from them before I can do my report and invoice. But I'll get it out in a couple days.

We did a lot of shoveling by hand to bed in the tank and lines.

Give me a phone call when you get time.

I tried you this morning early and you must have been out of range.

The pipe burned to here and then stopped. I cut it with a chain saw (ruined chain) and spliced in a 4" solid ADS pipe from the sump after some major modifications. Below is sump at pad one when we were just about finished.

The picture below is where the septic tank is between the two steel posts. The job is finished.
